Preamble:

A blockchain is a permanent, sequential list of transaction records distributed over a network. Each block in the chain contains a hash of the previous block, along with a timestamp and transaction data. This makes the blockchain inherently resistant to attack or manipulation. Blockchain technology is ideal for recording various types of transactions where data is sensitive or targeted by hackers for unauthorized duplication or other fraudulent activity.

Blockchain technology is growing in use and it's essential to understand its core business uses and benefits. The course is designed to help budding engineer of technical and nontechnical audiences to learn the key concepts of blockchain making clear the various enterprise applications.

Objective of the Course:

This Certificate Course is targeted for creating qualified professional in the field of Blockchain domain, which will help in employment and Entrepreneur development of the qualifier.

Outcome of the Course:

After completion of the course, participants will have an idea of Blockchain fundamentals and its implementation techniques. They will be able to understand, develop and implement blockchain using Javascript on their own.
