A9-R4: DATA COMMUNICATIONS AND NETWORK TECHNOLOGIES

NOTE:

- 1. There are **TWO PARTS** in this Module/Paper. **PART ONE** contains **FOUR** questions and **PART TWO** contains **FIVE** questions.
- 2. **PART ONE** is to be answered in the **OMR ANSWER SHEET** only, supplied with the question paper, as per the instructions contained therein. **PART ONE** is **NOT** to be answered in the answer book.
- 3. Maximum time allotted for **PART ONE** is **ONE HOUR**. Answer book for **PART TWO** will be supplied at the table when the answer sheet for **PART ONE** is returned. However, candidates, who complete **PART ONE** earlier than one hour, can collect the answer book for **PART TWO** immediately after handing over the answer sheet for **PART ONE**.

TOTAL TIME: 3 HOURS

TOTAL MARKS: 100

(*PART ONE - 40; PART TWO - 60*)

PART ONE (Answer all the questions)

	(Answer all the questions)
1.	Each question below gives a multiple choice of answers. Choose the most appropriate one and enter in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10)
1.1 A) B) C) C)	Performance of a network can be measured by considering transit time response time both A) and B) none of the above
1.2 A) B) C) D)	The term refers to the way in which a network is laid out physically. physical topology conceptual structure network design none of the above
1.3 A) B) C) D)	The main disadvantage of the ring topology of network is unidirectional traffic dedicated point to point connections both A) and B) none of the above
1.4 A) B) C) D)	Standards that are not approved by an organizing body, but have been adapted as standards through widespread use are known as default de facto de jure none of the above
1.5 A) B) C) D)	A is a set of rules that govern data communication; however, data communication can be made without it. protocol standards packages none of the above
1.6 A) B) C) D)	Wireless LANs use management frames control frames data frames all of the above

1.7 A) B) C) D)	listens to a portion of a spectrum, amplifies the incoming signal, and then rebroadcasts it at different frequency. Transponder Repeater Gateway None of the above
1.8 A) B) C) D)	Membership of a virtual LAN is based on port number topology used network size none of the above
1.9 A) B) C) D)	Which of the following networks requires that all channels in a message transmission path be of the same speed? packet-switched network circuit-switched network message-switched network None of the above
1.10 A) B)	The qualifier differential to PSK means that it uses phase shifts of multiple of 90° it uses phase shift of 45° phase shift is with reference to the previous bit transmitted
C) D)	none of the above
C)	
C) D)	none of the above Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following
C) D)	none of the above Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10)
C) D) 2. 2.1	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing.
C) D) 2. 2.1	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both — (i) high speed connectivity and (ii)
C) D) 2. 2.1 2.2	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both – (i) high speed connectivity and (ii) coverage area is within a town.
C) D) 2. 2.1 2.2	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both — (i) high speed connectivity and (ii) coverage area is within a town. Frequency and period of a digital signal are inverse of each other.
2.1 2.2 2.3 2.4	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both — (i) high speed connectivity and (ii) coverage area is within a town. Frequency and period of a digital signal are inverse of each other. Line coding is a process that converts digital signal to digital data.
C) D) 2. 2.1 2.2 2.3 2.4 2.5	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both – (i) high speed connectivity and (ii) coverage area is within a town. Frequency and period of a digital signal are inverse of each other. Line coding is a process that converts digital signal to digital data. The network allocation vector is a timer used for error checking.
2.1 2.2 2.3 2.4 2.5 2.6	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both — (i) high speed connectivity and (ii) coverage area is within a town. Frequency and period of a digital signal are inverse of each other. Line coding is a process that converts digital signal to digital data. The network allocation vector is a timer used for error checking. The basic unit of a Bluetooth network is called a piconet.
2.1 2.2 2.3 2.4 2.5 2.6 2.7	Each statement below is either TRUE or FALSE. Choose the most appropriate one and ENTER in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10) All the networks use distributed processing. MAN is the best choice when customers need both – (i) high speed connectivity and (ii) coverage area is within a town. Frequency and period of a digital signal are inverse of each other. Line coding is a process that converts digital signal to digital data. The network allocation vector is a timer used for error checking. The basic unit of a Bluetooth network is called a piconet. A unicast address defines a single computer.

3. Match words and phrases in column X with the closest related meaning/word(s)/phrase(s) in column Y. Enter your selection in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10)

X		Υ			
3.1	ARPANET	A.	CSMA/CA		
3.2	Cerf and Kahn	В.	Internet service provider		
3.3	ISP	C.	Transport layer		
3.4	Hop to hop delivery	D.	D. IP address		
3.5	Process to process delivery	E.	Data link layer		
3.6	Address which defines a host uniquely	F.	One bit signaling element		
3.7	Unguided media	G.	TCP		
3.8	Avoids collision on wireless networks		Advanced mobile phone system		
3.9	Cellular telephony area		wireless communication		
3.10	NRZ-L and FSK	J.	Internet		
		K.	CSMA/CD		
		L.	Cryptography		
		М.	Secret key		

4. Each statement below has a blank space to fit one of the word(s) or phrase(s) in the list below. Enter your choice in the "OMR" answer sheet supplied with the question paper, following instructions therein. (1x10)

A.	Secret	B.	Same	C.	Burst error
D.	10 Base 5	E.	White	F.	Guided media
G.	WAN	H.	CSMA	I.	Unguided media
J.	PPP – Point to Point Protocol	K.	Single path	L.	A semi column
M.	Firewall				

4.1	Twisted pair cable, co-axial cable and fiber optic cables are examples of						
4.2	means two or more bits in the data unit have changed from 0 to 1 or 1 to 0.						
4.3	defines format of the frame to be exchanged between devices.						
4.4	noise is not a natural noise.						
4.5	To minimize the chance of collision of frames and hence to increase performance the						
	method is used.						
4.6	A leased line in commonly used for links.						
4.7	The downlink and uplink channels of a satellite must not be						
4.8	is a component which blocks the network traffic based on set of rules for						
	security.						
4.9	is a thick Ethernet.						
4.10	Symmetric key in cryptography is also known as key.						

PART TWO (Attempt any **FOUR** questions)
