

## **B2.1-R5 : COMPUTER BASED NUMERICAL AND STATISTICAL METHODS**

**DURATION : 03 Hours**

**MAXIMUM MARKS : 100**

**Roll No. :**

**Answer Sheet No. :**

**Name of Candidate :** \_\_\_\_\_ ; **Signature of Candidate :** \_\_\_\_\_

### **INSTRUCTIONS FOR CANDIDATES :**

- Carefully read the instructions given on Question Paper, Answer Sheet.
- Question Paper is in English language. Candidate has to answer in English Language only.
- Question paper contains Seven questions. The Question No. 1 is compulsory. Attempt any FOUR Questions from Question No. 2 to 7.
- Parts of the same question should be answered together and in the same sequence.
- Questions are to be answered in the ANSWER SHEET only, supplied with the Question Paper.
- Only non-programmable, non-storage-type scientific calculators are permitted.
- Candidate cannot leave the examination hall/ room without signing on the attendance sheet and handing over his/her Answer Sheet to the Invigilator. Failing in doing so, will amount to disqualification of Candidate in this Module/Paper.
- After receiving the instruction to open the booklet and before answering the questions, the candidate should ensure that the Question Booklet is complete in all respects.

**DO NOT OPEN THE QUESTION BOOKLET UNTIL YOU ARE TOLD TO DO SO.**

1. (a) Assume that the weights of 800 male students are normally distributed with a mean of 28.8 kg and a standard deviation of 2.06 kg. Find the number of students whose weights are : (i) between 28.4 kg and 30.4 kg and (ii) more than 31.3 kg.

(b) Two cards are randomly selected from a set of 10 cards numbered 1 to 10. Find the probability that the sum of the numbers on the two cards is even if (i) the two cards are drawn together, and (ii) the two cards are drawn one after the other with replacement.

(c) In a random sample of 1000 people from city A, 400 are found to be consumers of rice. In a sample of 800 from city B, 400 are found to be consumers of rice. Does this data indicate a significant difference between the two cities as far as the proportion of rice consumers is concerned?

(d) Define errors. How many different types of errors occur while doing numerical computations ? How can they be avoided ?

(e) A study of prices of wheat at Punjab and Haryana gave the following data :

	Punjab	Haryana
Mean	₹ 19.5	₹ 17.75
S.D	₹ 1.75	₹ 2.5

The coefficient of correlation between the two is 0.8. Estimate the most likely price of wheat at Punjab corresponding to the price of ₹ 18 at Haryana.

(f) If  $\Delta$ ,  $\nabla$ , and  $E$  denotes forward difference operator, backward difference operator and shifting operator respectively, prove that  $E\nabla = \Delta = \nabla E$ .

(g) Round off the numbers 865250 and 37.46235 to four significant figures and compute  $E_a$  (absolute error),  $E_r$  (relative error) and  $E_p$  (percentage error) in each case.

(7x4)

2. (a) A random variable  $X$  has the following probability function :

$X :$	0	1	2	3	4	5	6	7
$P(X = x) :$	0	$K$	$2K$	$2K$	$3K$	$K^2$	$2K^2$	$7K^2 + K$

Determine :

(i)  $K$

(ii)  $P(X > 6)$  and  $P(0 < X < 5)$

(iii) if  $P(X \leq \lambda) > \frac{1}{2}$ , find the minimum value of  $\lambda$

(iv) variance of  $X$

(b) To determine whether there is a relationship between an employee's performance in the company's training program and their ultimate success in the job, the company takes a sample of 400 cases from its very extensive records and obtains the results shown in the following table :

Performance in training program				Total	
	Below Average	Average	Above Average		
Success in job (employer's rating)	Poor	23	60	29	112
	Average	28	79	60	167
	Very good	9	49	63	121
		Total	60	188	152
					400

Use the 0.01 level of significance to test the null hypothesis that performance in the training program and success in the job are independent.

(8+10)

3. (a) Find the regression line  $y = ax + b$  to the following data. Also estimate the value of  $y$  when  $x = 70$ .

$x :$	71	68	73	69	67	65	66	67
$y :$	69	72	70	70	68	67	68	64

(b) Apply the Jacobi method to solve the following system of linear equations. Continue the iterations until two successive approximations are identical when rounded to three significant digits.

$$5x_1 - 2x_2 + 3x_3 = -1$$

$$-3x_1 + 9x_2 + x_3 = 2$$

$$2x_1 - x_2 - 7x_3 = 3$$

(14+4)

4. (a) Three balls are drawn at random without replacement from a box containing 2 white, 3 red and 4 black balls. If  $X$  denotes the number of white balls drawn and  $Y$  denotes number of red balls drawn, find the joint probability distribution of  $(X, Y)$ .

(b) Out of 800 families with 4 children each, use binomial distribution to find how many families would be expected to have (i) 2 boys and 2 girls (ii) atmost two girls ? Assume equal probabilities for boys and girls.

(c) Find the first two derivatives of  $(x)^{1/3}$  at  $x = 50$  from the following table :

$x :$	50	51	52	53	54	55	56
$y = x^{1/3} :$	3.6840	3.7084	3.7325	3.7563	3.7798	3.8030	3.8259

(5+4+9)

5. (a) Find an approximate root of the equation  $x \log_{10} x = 1.2$  using False Position method, performing upto fourth iteration.  
 (b) Solve the following system of linear equations using Gauss-Elimination method.

$$x + 2y + z = 3,$$

$$2x + 3y + 3z = 10,$$

$$3x - y + 2z = 13.$$

(c) An automatic filling machine is designed to fill containers with an average of 1.6 grams of powder. After making some adjustments to the machine, a quality control engineer suspects that the machine is now underfilling. To test this, a sample of 20 containers is taken. The sample mean amount filled is 1.54 grams, and the population standard deviation is known to be 0.8 grams. At the 5% level of significance, is there sufficient evidence to conclude that the machine is underfilling ?

(d) Evaluate  $\int_0^1 \frac{1}{1+x^2} dx$  using trapezoidal rule with  $h = 0.2$ .

(8+4+3+3)

6. (a) Using the fixed-point iteration method, find a real root of the equation  $x^3 - x^2 - 1 = 0$ .  
 (b) Test whether the sample with values 63, 63, 64, 55, 66, 69, 70, 70 and 71 has been drawn from a population with a mean of 65 at the 5% level of significance.  
 (c) In a sample of 1000 cases, the mean of certain test is 14 and standard deviation is 2.5. Assuming the distribution is normal, find :  
 (i) How many students scored between 12 and 15 ?  
 (ii) How many students scored above 18 ?  
 (iii) How many students scored below 18 ?

(6+6+6)

7. (a) A manufacturer produces IC chips, 1% of which are defective. Find probability that in a box containing 100 IC chips, no defectives are found. (Use the Poisson approximation to the Binomial distribution).  
 (b) A solid of revolution is formed by rotating about the  $x$ -axis, the lines  $x = 0$ ,  $x = 1$  and a curve through the following points :

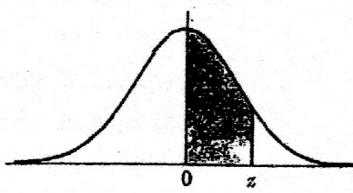

X :	0.00	0.25	0.50	0.75	1.00
Y :	1.0000	0.9896	0.9589	0.9089	0.8415

Estimate the volume of the solid formed using Simpson's one-third rule.

(c) Find the positive root of  $x^4 - x - 10 = 0$ , correct to three decimal places, using Newton-Raphson method.

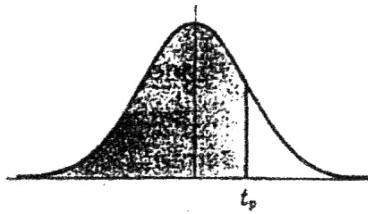

(6+6+6)

Values of  $e^{-\lambda}$   
( $0 < \lambda < 1$ )

$\lambda$	0	1	2	3	4	5	6	7	8	9
0.0	1.0000	.9900	.9802	.9704	.9608	.9512	.9418	.9324	.9231	.9139
0.1	.9048	.8958	.8869	.8781	.8694	.8607	.8521	.8437	.8353	.8270
0.2	.8187	.8106	.8025	.7945	.7866	.7788	.7711	.7634	.7558	.7483
0.3	.7408	.7334	.7261	.7189	.7118	.7047	.6977	.6907	.6839	.6771
0.4	.6703	.6636	.6570	.6505	.6440	.6376	.6313	.6250	.6188	.6126
0.5	.6065	.6005	.5945	.5886	.5827	.5770	.5712	.5655	.5599	.5543
0.6	.5488	.5434	.5379	.5326	.5273	.5220	.5169	.5117	.5066	.5016
0.7	.4966	.4916	.4868	.4819	.4771	.4724	.4677	.4630	.4584	.4538
0.8	.4493	.4449	.4404	.4360	.4317	.4274	.4232	.4190	.4148	.4107
0.9	.4066	.4025	.3985	.3946	.3906	.3867	.3829	.3791	.3753	.3716

( $\lambda = 1, 2, 3, \dots, 10$ )

$\lambda$	1	2	3	4	5	6	7	8	9	10
$e^{-\lambda}$	.36788	.13534	.04979	.01832	.006738	.002479	.000912	.000335	.000123	.000045

Note: To obtain values of  $e^{-\lambda}$  for other values of  $\lambda$ , use the laws of exponents.

Example:  $e^{-3.48} = (e^{-1.00})(e^{-2.48}) = (0.04979)(0.6188) = 0.03081$ .

Table 7. Critical Values of the Kolmogorov-Smirnov One Sample Test Statistics

This table gives the values of  $D_{n,\alpha}^+$  and  $D_{n,\alpha}$  for which  $\alpha \geq P\{D_n^+ > D_{n,\alpha}^+\}$  and  $\alpha > P\{D_n > D_{n,\alpha}\}$  for some selected values of  $n$  and  $\alpha$ .

One-Sided Test :						Two-Sided Test :					
$\alpha =$	.10	.05	.025	.01	.005	$\alpha =$	.10	.05	.025	.01	.005
